

ANSH DANKHARA

+49 155 10828618 ◊ Berlin, Germany ◊ ansh.dankhara.74@gmail.com ◊ [LinkedIn](#) ◊ [GitHub](#)

OBJECTIVE

Data Science / ML intern with hands-on experience in end-to-end ML pipelines, NLP systems, and large-scale predictive modeling. Skilled in supervised/unsupervised learning, statistical modeling, feature engineering, and production model deployment. Proficient in Python, scikit-learn, SQL, FastAPI, and AWS.

PROJECTS

Urban-Mobility-ETA

[GitHub](#)

- Built an end-to-end ML pipeline on 9.28M NYC TLC Q1-2024 trips, integrating hourly weather and spatial zone data; applied data wrangling, time alignment, and assumption-driven simulation to engineer delivery-order labels
- Trained regression models (Linear → Random Forest) with time-aware cross-validation, achieving 10% MAE reduction (5.72 → 5.17 min); performed hour-level error analysis to diagnose congestion and long-trip underestimation
- Deployed as FastAPI microservices with a Streamlit dashboard; implemented Evidently for automated data drift monitoring

Empathetic Response AI

[GitHub](#)

- Designed and deployed a production-style NLP pipeline for multi-class text classification (emotion + urgency detection) using TF-IDF + Logistic Regression; trained on ISEAR and FinancialPhraseBank datasets with class balancing and cross-validation
- Built multi-model inference architecture (emotion + urgency → response logic); exposed real-time REST API via FastAPI with joblib model persistence for reproducibility
- Applied text preprocessing, feature extraction, and threshold tuning to optimise Precision-Recall trade-off across emotion categories

SKILLS

Programming	Python · SQL (PostgreSQL, MySQL) · Git · pandas · NumPy
ML	scikit-learn · supervised/unsupervised learning · feature engineering · hyperparameter tuning · cross-validation · imbalanced data handling
Modeling	regression · classification · NLP (TF-IDF) · time series analysis · statistical modeling · A/B testing
Evaluation	ROC-AUC/PR-AUC · precision/recall/F1 · MAE · threshold tuning
Data/Viz	data wrangling · ETL pipelines · Matplotlib · Seaborn · Jupyter/Colab · VS Code
MLOps/Cloud	FastAPI · Streamlit · Evidently · Docker · AWS (EC2, S3, RDS, IAM) · model persistence (joblib)
Learning	PyTorch · MLflow (experiment tracking) · Hugging Face Transformers · LangChain

EXPERIENCE

Data Analyst

Apr 2024 – Mar 2025

OTPless (Auth Tech Startup)

Delhi, India

- Performed EDA and statistical analysis on signup funnel and cohort retention (SQL, Python), identifying key drop-off points and improving conversion by 10% (relative)
- Designed KPI framework and built automated data pipelines and dashboards, reducing ad-hoc reporting and improving visibility into growth and engagement metrics

EDUCATION

M.Sc. Data Science, University of Europe for Applied Sciences, Potsdam

Expected 2027

Coursework: Machine Learning · Time Series Analysis · Statistical Learning · Data Engineering · Cloud Computing (AWS)

B.Sc. Information Technology, GLS University, India

2021 – 2024

Thesis: Credit Card Fraud Detection (Logistic Regression, Random Forest, SVM) ◊ CGPA: 8.5/10 (German equivalent: 1.6)

CERTIFICATIONS & LANGUAGES

AWS Certs (2024): Data Engineering Essentials · Cloud Foundations · Web Application Builder — Credly

Languages: English: C1 (Fluent) · German: A2 (Basic) · Hindi: Native
